

FingerSaver Safe Working Practice.

The following information is provided to ensure that all users of the Fingersaver achieve the best and safest benefits of its design and intended use:

What must I do when using my Fingersaver?

- ❖ ALWAYS calculate potential Risk, prior to each and every Task.
- ❖ ALWAYS wear Eye Protection while using striking tools.
- ❖ ALWAYS choose a hammer of a suitable mass and size, in order to allow a natural swing by the user, and letting the weight of the hammer do the work.
- ❖ ALWAYS ensure that the selected tool is securely locked in place by tensioning the puller rubber strap in the Socket.
- ❖ ALWAYS support both the Fingersaver and the selected tool simultaneously until it is securely positioned on the Nut / Bolt; once in place, the user can move their hand(s) to the handle grip, crucially keeping them away from potential pinch points and impact zones.

What should I avoid doing when using my Fingersaver?

- ❖ NEVER attempt to lift anything using the Fingersaver, it is not intended to be a lifting device and should not be used as such; no safe working loads or breaking strains are implied or advised.
- ❖ NEVER attempt to repair or replace damaged components; if there is significant damage, the Fingersaver should be disposed of safely.

Additional Information/Features.

- ❖ The materials used in the Fingersaver are designed to be:
 - o lightweight and the design is intended to be quick and easy to support and release the supported tool; if dropped the Fingersaver itself is very unlikely to injure the user, injure others, damage equipment and will not directly generate sparks in hazardous environments.
 - o resistant to ozone, UV and a large number of contaminants, in particular general lubricants that may form on its surface through contact with soiled work gloves or plant areas.
- ❖ **The Fingersaver will absorb the direct shock and vibration from hammer impacts - to fully benefit from this and help prevent conditions such as Hand-Arm Vibration Syndrome (HAVS), the Fingersaver should be held firmly but not tightly.**
- ❖ The main plastic body of the Fingersaver is designed to not splinter and will not deteriorate easily in normal use.
- ❖ **Long length Fingersavers enables the operative to maintain a more comfortable distance when working on hot equipment.**
- ❖ The Fingersaver may be considered for use in other applications and/or on other tools, where the operator wishes to move hands and fingers further away from the risk of impact or pinching; the operator MUST independently assess whether a Fingersaver is appropriate or safe to use in such cases.
